

Blinkit Sales Analysis Dashboard

Power BI Project Documentation

Prepared by: Jass

Tools: Power BI, Power Query, DAX, CSV

1. Project Overview

This project presents an interactive Blinkit Sales Analysis Dashboard developed using Microsoft Power BI. The source dataset was available in CSV format. Data cleaning and transformation were performed directly in Power BI using Power Query, followed by data modeling, KPI creation, analysis and interactive visualization.

2. Project Objectives

- Analyze overall sales performance.
- Track important business KPIs.
- Analyze sales by outlet type, size and location.
- Compare product/item categories based on sales contribution.
- Analyze sales across outlet establishment years.
- Compare product fat-content segments.
- Create an interactive dashboard for business analysis and decision-making.

3. Tools & Technologies

Tool / Technology	Purpose
Power BI	Dashboard development, data modeling and visualization
Power Query	Data cleaning and transformation
DAX	Measures, calculations and KPIs
CSV	Source dataset

4. Data Cleaning & Transformation

The original dataset was provided in CSV format and imported into Power BI. Power Query was used to prepare the data before dashboard development.

- Reviewed dataset structure.
- Checked and corrected data types.
- Handled missing or inconsistent values where required.
- Cleaned and standardized fields used for analysis.
- Prepared the transformed dataset for modeling and visualization.

5. Key Performance Indicators

KPI	Value
Total Sales	\$1.20M
Number of Items	8,523
Average Sales	\$141
Average Rating	3.92

6. Dashboard Analysis

Outlet Establishment Analysis

Sales are analyzed by outlet establishment year. The displayed trend reaches approximately \$205K around 2018.

Outlet Size Analysis

Sales are compared across Small, Medium and High outlet sizes. Medium-sized outlets contribute the largest displayed share.

Outlet Location Analysis

Tier 1, Tier 2 and Tier 3 locations are compared. Tier 3 shows the highest displayed sales contribution.

Item Type Analysis

Sales are compared across item categories. Fruits & Vegetables and Snack Foods are among the stronger categories shown.

Fat Content Analysis

Low Fat and Regular product segments are compared to understand their sales contribution.

Outlet Type Performance

Outlet types are compared using Total Sales, Number of Items, Average Sales, Average Rating and Item Visibility.

Interactive Filters

The dashboard includes filters for Outlet Size, Outlet Location and Item Type.

7. Key Business Insights

- Overall sales are approximately \$1.20M.
- The analyzed data contains 8,523 items.
- Average sales are approximately \$141 and average rating is 3.92.
- Sales reach a displayed peak of approximately \$205K around 2018.
- Tier 3 locations show the highest displayed sales among the location tiers.
- Medium-sized outlets contribute the largest displayed sales share among outlet sizes.
- Fruits & Vegetables and Snack Foods are among the leading categories shown.
- The dashboard enables dynamic comparison through interactive filters.

8. Project Workflow

CSV Dataset → Power Query → Data Cleaning & Transformation → Data Modeling → DAX Measures → KPI Creation → Visualization → Interactive Dashboard → Business Insights

9. Skills Demonstrated

- Power BI
- Power Query

- DAX
- Data Cleaning
- Data Transformation
- Data Modeling
- KPI Development
- Data Visualization
- Business Intelligence
- Business Analysis

10. Conclusion

The Blinkit Sales Analysis project demonstrates the process of transforming raw CSV data into an interactive business intelligence solution. Power Query was used for data preparation, DAX for calculations and Power BI for visualization. The resulting dashboard provides a clear view of sales performance, outlet characteristics and product-level trends.
